Health Information System for the Future A SUSSA collaboration program

SKL 2017-08-31

Content

- Background
- Creating a vision
- Procurement
- SUSSA FVIS Collaboration

What is SUSSA?

Strategisk Utveckling av Sjukvårds Stödjande Applikationer

- A customer group formed in the late nineties
- Cooperation on management and development of a common electronic health record (NCS Cross, Evry)
- Management and development collaboration

Creating a vision

A long-term strategy (2014)

To meet the demands from the health-care and ensure an effective and safe development of the future health information system in pace with the digitalization in society.

Basic principles

- Business focus and participation!
- Patient- and population perspective!
- Suppliers plans for the future?
- Sweden's national vision for E-health
- Collaboration and transparency

Horizon scanning

January 2015

- 7 suppliers
- 290-430 participants
- Questionnaires

Workshops and more workshops

- Patient centered care support?
- Your best day at work in 5 years?
- Future Health information system what does it mean?

If I had asked people what they want before the T-Ford they would have answered – "A faster horse!"

Henry Ford

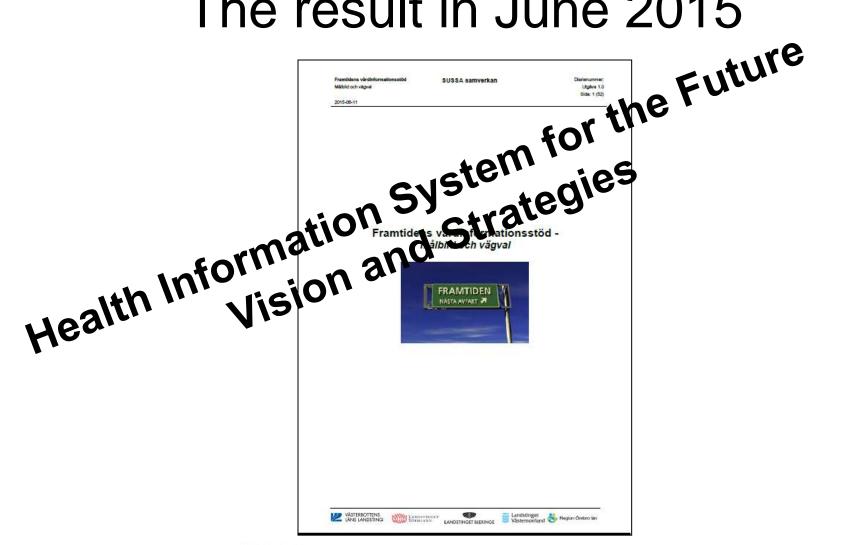

The result in June 2015

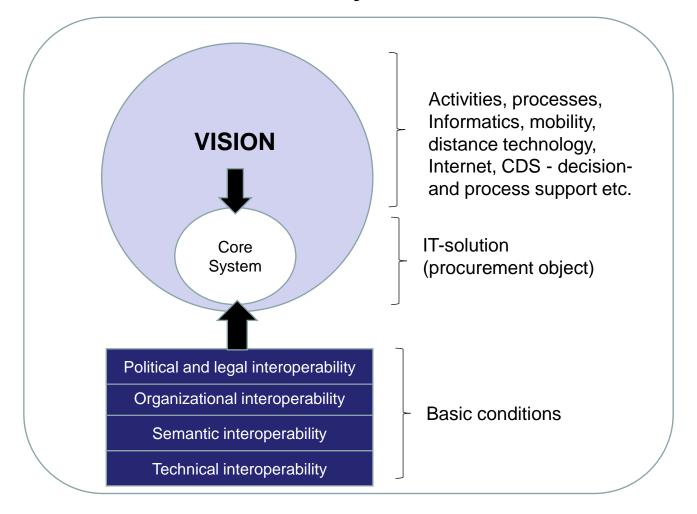

Health Information System for the Future

Procurement of a new Health Information System

- Covers a core system and operational service
- Selective process
- Phase 1 invitation September 1st 2016
- Phase 2 publishing August 24th 2017

Participating counties

County/Region	Procurement	Business development
Västerbotten	\checkmark	\checkmark
Västernorrland	\checkmark	\checkmark
Örebro	\checkmark	\checkmark
Sörmland	\checkmark	\checkmark
Blekinge	\checkmark	\checkmark
Norrbotten	Option	\checkmark
Dalarna	Option	\checkmark
Halland	Option	\checkmark
Gävleborg	Option	\checkmark

25 % of total population in Sweden

Ruling principles and strategies

- Sustainability and continuous improvement
- A proactive partnership with suppliers
- Focus on organizational development and change management
- Taking advantage of digitalization
- Continuous professional development
- Efficient use of national services and infrastructure
- System consolidation
- Participation of residents and patients
- Development of flexible care forms ie. care at a distance
- A national ecosystem of health and social care information
- Standardization in order to increase collaboration

Reasons for collaboration

- Create synergies to reduce cost
- Faster results
- Standardization
- Exchange of knowledge and experience
- A stronger part against the supplier
- Enhance improvement

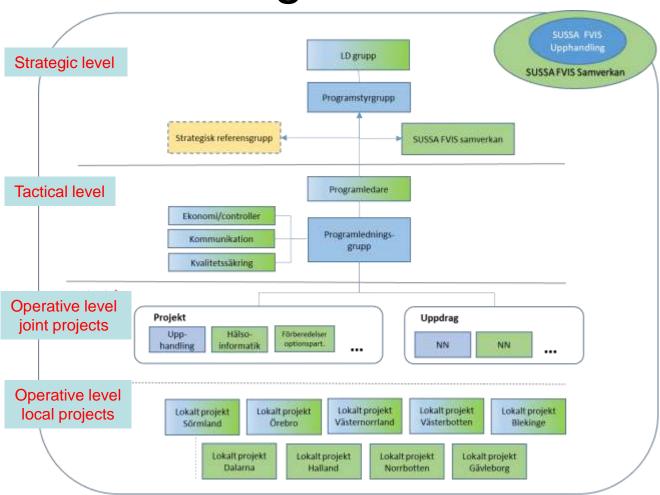

Organization

On-going joint missions and projects

- Health Informatics
- Process development
- System integrations
- Establish an operating organization
- Prepare for implementation

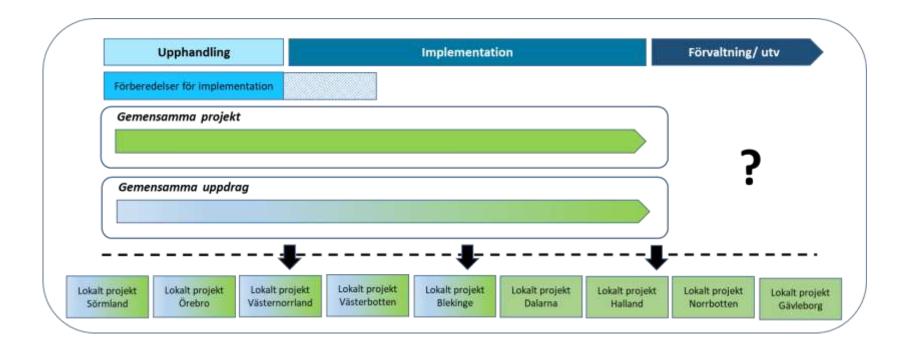

Creating good conditions for effective local implementation

Effects of the collaboration

Local adaptations and amendments

- Health Information Support
- Processes
- Terms
- Concepts
- etc.

Same for all counties/regions

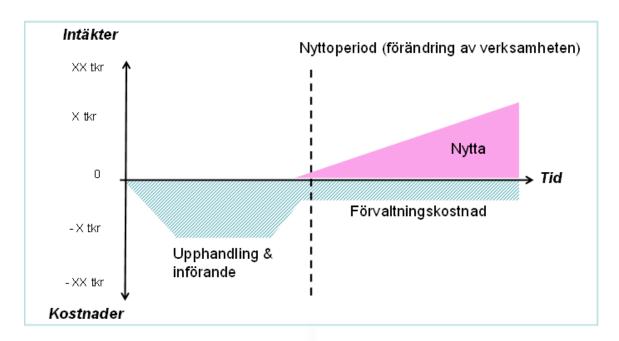

Effect control and benefit realization

Break down the effect goals into evaluable objects that you can follow up and measure over time

You can please someone

But you can't please everyone all the time
